BCWS Update

Overnight, crews and structure protection personnel prioritized the protection and defense of structures in the fire area. Fire crews and aircraft continued to focus efforts on securing the perimeter of the communities near this incident. The fire is currently burning Rank 2 and 3, meaning a low to moderately vigorous surface fire with visible open flame and occasional candling or trees. Hot and dry conditions have made fuels highly susceptible to ignition. Increased fire activity throughout the day is anticipated.

Crews are working along the northwest and south flanks of the fire to establish control lines while helicopters assist with bucketing operations to decrease fire behaviour.

We are working with BC Hydro and the Ministry of Transportation and Transit in response to this incident.

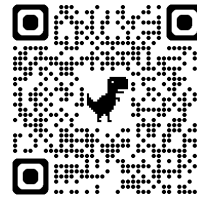

This afternoon an Incident Management Team will be travelling to the area and will transition in over the next day to assume command of this incident.

For current resource numbers and types, along with any updates that occur throughout can be found on the incident page. Access the incident page by scanning this QR code:

Travel and Highway Closures

Highway 1 is currently closed between Boston Bar Station Rd and Cornwall Rd for 117.0 kilometres. For ongoing updates on the Highway 1 corridor please visit [DriveBC](#) or scan the QR code for their website.
